If more than one search is submitted, please prioritize searches in order of need.

Please provide a detailed statement of the search topic, and describe as specifically as possible the subject matter to be searched. Include the elected species or structures, keywords, synonyms, acronyms, and registry numbers, and combine with the concept or utility of the invention. Define any terms that may have a special meaning. Give examples or relevant citations, authors, etc, if known. Please attach a copy of the cover sheet, pertinent claims, and abstract.

Title of Invention: Methods and compositions for alleviating ~~stuttering~~ stuttering
Inventors (please provide full names): John J. Murphy
Kay Jorgenson D'Orlando
Earliest Priority Filing Date: 7/29/99

For Sequence Searches Only Please include all pertinent information (parent, child, divisional, or issued patent numbers) along with the appropriate serial number.

please search claim 2 and 3. The compound used in the claims, particular partial GABA receptor agonist such as sariclonide and pagoclonide.

If there is any prior art for pagoclonide, then it could be good.

Applicant's remarks regarding the compounds of the present invention are not directly involved in the release or synthesis of GABA itself has been considered but found unpersuasive as to non-obviousness of using pagoclone in a method of treating stuttering because paglacone is known to be a partial GABA agonist which would be expect to bind to the GABA receptor and result in increasing GABA neurotransmitter function. Based on Sandyk, it is known that the immediate improvement of stuttering was observed in increasing GABA activity. One skilled in the art would reasonably expect any ligand that binds to the GABA receptor and exhibits an increase of GABA neurotransmitter function such as an agonist (GABA) or a partial agonist (pagoclone) to be useful in improving or treating stuttering.
